

Profi Electrolyte

Concentrate

Feed supplement for horses

In times of high performance, a horse can lose up to 25 litres of sweat per day. With the sweat, important nutrient salts are lost which are of great importance to your horse's fluid balance. However, with the provision of electrolytes, these nutrient reservoirs are quickly replenished.

The benefits at a glance:

- low dosage
- the ability to perform without limitations
- electrolyte reserves can build up
- ideal for the use in times of intensive training
- regulates the fluid balance

Recommended feeding:

Feeding recommendation:

ponies & foals: 10 g per day
light horses: 15 g per day
larger horses: 25 g per day.

1 measuring spoon = approx. 20 g

Electrolytes can be dissolved in the drinking water or administered with an oral syringe.

Composition: 56,3 % Dextrose, 30,3 % Sodium chloride, 8,7 % Potassium chloride, 4,2 % Calcium carbonate, 0,4 % Magnesium oxide

Analytical constituents and levels: 22,60 % Chloride, 11,50 % Sodium, 4,50 % Potassium, 1,60 % Calcium, 0,30 % Magnesium
