

EMH Structure grain-free

Special Feed

Feed supplement for horses and ponies

Structure Grain Free with highly digestible, intact crude fibre is designed for feeding metabolically compromised or sensitive horses. Due to the low starch and sugar content, it relieves the body's own metabolic processes; the high raw fibre content promotes a harmonious colonic flora. Sunflower seeds and rice husk bran provide essential fatty acids. Alfalfa is characterised by high-quality protein and is therefore ideal to provide the body with amino acids and support muscle growth. Tasty apple pomace provides highly valuable pectins. Structure Grain Free can contribute significantly to a better quality of life of your horse due to its natural ingredients. Thanks to the addition of EMH, digestion is even more optimally supported and, with regular feeding, an improved general condition and increased vitality can be expected.

The benefits at a glance:

- starch and sugar reduced
- ideal for horses with metabolic disorders as a single hard feed
- the high levels of structure and fibre increase mastication and the production of saliva, thereby improving the gastrointestinal environment
- lower volume of hard feed but, at the same time, with better digestibility and energy supply, which, in conjunction with sufficient roughage, protects the small sensitive stomach and the entire digestive system
- with high quality vegetable fatty acids
